The BRCA1 protein has been characterized as a tumour suppressor protein. Alterations in the amino acid sequence of BRCA1 causes breast and ovarian cancers by removing the controls on cell growth and proliferation. Research has shown that different regions on the BRCA1 molecule have different effects on cell growth and tumour suppression (e.g. full length truncated BRCA1 has no effect on breast cancer cell growth but will inhibit ovarian cancer cell growth). It has been suggested that different bear cell factors (e.g. proteins) interact with different regions of the BRCA1 to control its function. The identification of these proteins (e.g. BRCA1MP) will facilitate the development of novel diagnostic methods and new therapeutics for identifying and treating cancers caused by changes in the expression or activity of BRCA1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulator proteins that bind to and modulate the activity of the BRCAl tumour suppressor gene product, useful for the treatment of ovarian and breast cancer

This cDNA clone, designated 091-21A31 (ATCC 98141), codes for a 53 kDa BRCA1 modulator protein (see AAW37881) that binds to the tumour suppressor gene product BRCA1, and which is characterised by a zinc finger domain and a leucine zipper motif. 3 cDNA clones (see also AAV29063 and AAV29064) coding for BRCA1 modulator proteins (see AAW37881-83) were isolated from a HeLa cDNA library using a yeast two-hybrid assay with a GAL4-BRCA1(8-1293) fusion as bait. Vectors and host cells comprising the isolated nucleic acid sequences are claimed, as well as a process for producing BRCA1 modulator protein by culturing these host cells. BRCA1 modulator protein and nucleic acids can be used to diagnose diseases involving unwanted cell growth, e.g. breast cancer, and to identify the treatment of each disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1863

The invention relates to novel isolated polypeptides (I), and CC polynucleotides (II). (II) (II) and the antibody to (I) are useful for CC diagnosing, preventing and treating diseases including immune system CC disorders (e.g. congenital and acquired immunodeficiencies, autoimmune CC transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and CC other blood-related disorders (sickle cell anaemia), myeloproliferative CC disorders, primary haematopoietic disorders, hyperproliferative CC disorders (e.g. Gaucher's disease and cancer), neurodegenerative CC disorders (e.g. glomerulonephritis), cardiovascular disorders, renal CC disorders (e.g. glomerulonephritis), cardiovascular disorders, in CC e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. disorders (e.g. primary disorders, dermatological disorders (e.g. addison's disease), reproductive system disorders, gastrointestinal CC disorder (inflammatory disorders), liver disorders, gastrointestinal CC disorder (inflammatory disorders), liver disorders, activators of CC T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAS26976-AAS27850 represent novel signal transduction CC pathway protein coding sequences and PCR primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-DEC-2000;

                                                                                                     8
                                                                                                                                           밁
 밁
                                                                                                                                                                             Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                          diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Q
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnostics, forensics, responsible for genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence given is the mutant pig ryanodine receptor (RYR1) gene of from swine cDNA. The polymorphic sites were observed in comparisons of pietrain and Yorkshire breeds. There are 17 polymorphisms between the two breeds. The polymorphism at position 1972 causes a mutation of from Arg to Cys and this is thought to be the molecular basis of porcine malignant hyperthermia (MH). This mutation lies within the region of RYR1 that is concerned with the binding of regulators of Ca2+ release channel gating. Analysis of surrounding sequences suggests that this mutation lies within a beta strand domain comprising roughly of amino acids 520 to 830. RYR1 is the calcium release channel of the sarcoplasmic reticulum and is a large protein which spans the gap between the transverse tubule and the sarcoplasmic reticulum. The cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine, and micro-molar cannel is activated by ATP, calcium, caffine,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

developing treatments for cancer, particularly those cancers which display resistance to agents and exhibit expression of the markers. The anticancer agents developed by the novel method can be used to treat cancer. Probes based on the markers can be used to detect transcripts or genomic sequences corresponding to the markers, in the identification of cells or tissues which mis express the protein. Cancers which may be targeted include carcinoma (e.g. squamous cell carcinoma), sarcoma (e.g. fibrosarcoma) leukaemia (e.g. Jymphocytic leukaemia), lymphoma, plasmocytoma, reticulum cell sarcoma, Hodgkin's disease and tumours (e.g. glioma). The present sequence is one of the 1046
                                                                                                                                                                                                                                                                                                              markers for determining the sensitivity of a cancer cell to the anticancer agent TAXOL. Cancer cells can be treated with TAXOL when they are shown to express one of the 242 sensitivity markers or the cells are shown not to express one of the 804 resistance markers. The methods can be used to determine the effectiveness of TAXOL in the treatment of cancer cell growth in an individual. The markers can be used as targets in developing anti-cancer agents such as chemotherapeutic compounds. The markers can also be used as targets
                                           lymphoma, plasmocytoma, reticulum cell sarco tumours (e.g. glioma). The present sequence novel cancer cell markers.

                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a fragment of the genomic sequence containing the coding region for the mouse WRN gene (AAR83004). The corresponding human gene (AAR3001) encodes a protein related to Werner's syndrome. The products can be used for the detection and treatment of Werner's syndrome (WS), an autosomal recessive disorder with a complex phenotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated nucleic acid molecule encoding the WRN gene product useful for detection and treatment of Werner's syndrome, and

                                   Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as

                                                                                                                                                                                                                                          in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                             Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                C.N.S disorders.
Note: The sequence data
                                                                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, timmunosuppressant and cytostatic activity. The polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acids and polypeptides, useful such as central nervous system injuries -

                                                                                                                                                                                                                                                                                                                                      immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activiny, inhibin activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                              expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoletic-related diseases, especially.
                                                                                                                                                             AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-NOV-2000;

```

especially

the

AAM82169 AAK64703

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome

(I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in discretic forces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB19913 and AB19914 represent PCR primers for a mouse ischaemic condition related sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Examining the ischemic condition (e.g expression levels of particular genes by determining the expression profile

A DNA probe from this P. cynomolgi sequence was a 700 bp pstI fragment encoding the C-terminal domain and about 350 bases of the 3' untranslated region of the gene. Specifically, the probe, designated P236-7, encompasses bases 851-1827 flanked by C and G tails. This gene is useful in the construction of an anti-malarial vaccine.                                                                                                                                                                                                                                                                                                                                              This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (MIZU/)

                                                                                                                                                                                                                                                        1021
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an antisense oligonucelotide targetted to a gene encoding a subunit of I-Kappa-B kinase (IKK) which inhibits it expression, and thereby inhibits expression of a cytokine such as IL-6 (interleukin-6). I-kappa-B kinase activates NF-Kappa-B (nuclear factor-Kappa-B) which acts a transcriptional regulator of cytokine genes. The antisense oligonucleotide can be used in gene therapy to treat rheumatoid arthritis, immune disorders and cancers. Sequences AAC81422-C81426 are cDNAs derived from genes whose expression may be inhibited using an antisense oligonucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                      inflammation. The ON can have antiinflammatry, antiallergic,

cantiasthmatic, cytostatic and analgesic activities. The compositions are

cuseful for the treatment of diseases associated with inflammation,

impaired airways, including lung diseases and diseases whose secondary

ceffects afflict the lungs of a subject. They can be used for treating

ce.g. ischaemic conditions, pulmonary vasoconstriction, allergies,

cc asthma, impeded respiration, respiratory distress syndrome, pain, cystic

cfibrosis, pulmonary hypertension, emphysema, chronic obstructive

cc pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,

cc carcinomas, and cancers which may metastasise to the lungs, including

breast and prostate cancer. The reduction of the adenosine content of

cc the ONs reduces side effects. The A-containing ONs break down with the

crelease of deoxyadenosine which activates adenosine receptors causing

conchoconstriction and inflammation. AAA32313 to AAA35312 represent the

-2 (RAP-2). The RAP-2 proteins, isoforms, analogs, fragments or derivatives or DNA can be used for the modulation or mediation of the RIP modulated/mediated intracellular effects on the inflammation, cell death or cell survival pathways in which RIP is involved directly, or indirectly via other modulators/mediators of these pathways. They can be used for treating e.g. septic shock, graft versus host rejection, acute hepatitis, diabetes or multiple sclerosis. They can also be used for treating tumor cells or HIV-infected cells or other diseased cells. The RAP-2 binding proteins can be used for modulating/mediating the function of RAP-2. The products can also be used for diagnostic purposes, e.g. for identifying disorders related to abnormal functioning of cellular effects mediated by the p55-R, FAS-R or other related receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammation; cell death; cell survival; septen success; tumor; graft versus host rejection; diabetes; multiple sclerosis; tumor; HIV infection; p55-receptor; FAS-receptor; human; ss.

                  The invention relates to areceptor interacting protein (RIP)-associated protein-2 (RAP-2). The RAP-2 proteins, isoforms, analogs, fragments or derivatives or DNA can be used for the modulation or mediation of the RIP modulated/mediated intracellular effects on the inflammation, cell death or cell survival pathways in which RIP is involved directly, or indirectly via other modulators/mediators of these pathways. They can bused for treating e.g. septic shock, graft versus host rejection, acute hepatitis, diabetes or multiple sclerosis. They can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (YESH )

The products can also be used for diagnostic purposes, e.g. for identifying disorders related to abnormal functioning of cellular effects mediated by the p55-R, FAS-R or other related receptors. The present sequence represents the nucleotide sequence of RAP-2 clone #41072. This sequence was identical to a 1.5 kb clone (AAZ07513) in its coding region, but showed differences in the5' non-coding region. Both these sequences are assumed to be alternatively spliced forms of the same

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.

The antisense oligonucleotides and (I) can be used to down regulate the expression and or activity of target polypeptides associated with clung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, cytokine and creceptors, cytokine and creceptors, CNS and peripheral nervous and non-nervous system ereceptors, defensins, growth factors, vasoactive peptides and creceptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction, allergy(ies) and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from nulmonary vasoconstriction inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base (I) content in the language of the l

cc asthma, impeded respiration, respiratory distress syndrome, pain, cystic cc fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including threast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the crelease of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA3231 to AAA35312 represent the cnucleotide sequences given in the sequence listing from the present cremit invention, which correspond to SEQ ID NO:1 to 2815, and then the last CC differ from the previously named sequences. SEQ ID NO:11 to 1880 cc AAA33233 to AAA3392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present creates in the sequences of the present creates in the sequences of the present convention do not match up with their corresponding SEQ ID NO: sequences.
                                                                                                                                                                                                                                                                                                                                                                                                 antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects affilict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

The LANA protein is necessary for the efficient persistence of rhadino virus DNA in mammalian cells. Persistent rhadino virus infection is implicated in a variety of diseases e.g. Kaposi's Sarcoma (KS), Primary Effusion Lymphoma (PEL) and multicentric Castleman's disease. In addition, KS is a common malignancy in HIV patients. KSHV persists in host cells in a latent form. One of the few genes expressed from the latent viral DNA is LANA. LANA associates with both human chromosomes and with the rhadino virus cis-acting element (RVCAE), thereby providing a tethering function: the KSHV DNA episome is "Lied" to the host chromosomes. This allows the viral DNA to persist in the host cell. The present sequence may be used to screen and identify molecules that inhibit LANA interaction with RVCAE, thereby interfering with the latency cycle of this virus. Potential antiviral treatments for the above montioned disease may therefore he bead on LANA decreals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein suitable for tethering DNA to Histone HI. Methods for screening for compounds which are agonistic or antagonistic for the tethering of viral proteins to histone HI and DNA binding sites are useful for developing the method of viral transfer. The composition has applications to gene therapy, including the treatment of multiple sclerosis, Parkinson's disease, Huntington disease and diabetes. The present sequence represents the nucleotide sequence of the Kaposi's sarcoma associated herpesvirus (human herpesvirus 8) latency-associated nuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides a composition comprising nucleic acid, histone H; protein and expression vector operationally encoding a protein suitable for tethering the nucleic acid to the histone HI protein, where the tethering protein is LANA. The composition is useful in aiding the tethering protein is LANA in the host cell. The viral vector encodes a protein suitable for tethering has to state the viral box to the history of the viral vector encodes a protein suitable for tethering has to state the viral vector encodes.

                                                                                                                                                                                                                                                                                                                                                        This sequence is a fragment of the Kaposi's sarcoma-associated herpesvirus (KSHV) LUR (long unique region). This fragment contains coding regions for ORF65 which encodes capsid protein IV, ORF66, ORF67 which encodes togument protein IV, ORF68 which encodes cyclin D, ORF69, K12 which encodes kaposin, K13, ORF72 which encodes cyclin D, ORF69, K12 which encodes kaposin, K13, ORF72 which encodes cyclin D, ORF73 which encodes immediate early protein (IEP), K14 which encodes OX-2 (V-adh), ORF74 which encodes G-protein coupled receptor, ORF75 which encodes tegument protein/F6ARAT, K15, KSHV is a new human Herpesvirus (HHV8) believed to cause Kaposi's sarcoma (KS) which is the most common form of neoplasm occurring in persons with acquired immune deficiency syndrome (AIDS). The DHFR protein is useful for vaccination, prophylaxis, diagnosis and treatment of a subject with Kaposi's sarcoma and for detecting expression of a DNA virus associated with Kaposi's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Kaposi's sarcoma-associated herpes virus di:hydro:folate reductase and is useful i or diagnosis of Kaposi's sarcoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Kaposi's sarcoma; acquired immune deficiency syndrome; AIDS; DHFR; Budihydrofolate reductase; LUR; long unique region; vaccine; prophylax: diagnosis; treatment; HHVB; capsid protein IV; tegument protein IV; glycoprotein; kaposin; cyclin D; immediate early protein; IEP; OX-2;

CC This sequence represents the long unique region and terminal repeat of CC the Kaposi's sarcoma-associated herpes virus (KSHY). KSHV is also known CC as human herpes virus (KHP). This sequence contains the DNAs of the CC invention which encode KSHV polypeptides selected from: (a) viral CC macrophage inflammatory protein (MIP) II; (b) viral interleukin-6 (IL-6); CC (c) viral IRF 1; (d) complement-binding protein; glycoproteins B, M or L; (d) capsid protein IV encoded by ORF65; and (e) immediate early protein CC encoded by ORF3. Labelled probes for the nucleic acid, proteins encoded by it, and antibodies (Ab) specific for the protein sare useful for CC detecting HHVB, specifically for diagnosis of Kaposi's sarcoma, in body CC fluids or tissue samples. HHVB infections can be treated with antisense CC or triplex forming molecules or agents that bind specifically to the CC protein. Ab may be used for prophylaxis or treatment of HHVB infection, CC while the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and HHVB may be implicated in many cother lymphoproliferative diseases such as lymphomas, leukaemia, CC splenomegaly and mycosis fungoides. CC lls and animals containing the nucleic acid are useful for drug screening. HHVB-derived peptides can be used with methotrexate. These can also be used to determine can be inhibited with methotrexate. These can also be used to determine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                25-JUL-1996;

                                                                             s sequence represents a fragment of the genomic sequence containing coding region for the mouse WRN gene (AAX83004). The corresponding an gene (AAX8301) encodes a protein related to Werner's syndrome, products can be used for the detection and treatment of Werner's drome (WS), an autosomal recessive disorder with a complex phenoty.
                                                                                                                                                                                                                                                                                                                                                                                            musculus

           The invention relate to the isolation of genes AAC59907-C59956 encoding C 50 human secreted proteins AAB38702-B38751. The genes can be used to generate fusion proteins by linking to the gene for the human CC immunoglobulin G FC portion for increasing the stability of the fusion protein as compared to the human protein only. The genes and CP proteins are useful for preventing, ameliorating or treating medical CC conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hemolytic anaemia, autoimmune thyroidistis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 200

                  polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   numbers 408, 458 and 500 are missing from the sequence listing) sequences

C (Ss) and sequences complementary to (Ss). The nucleic acid may be a
peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may

C form part of a set of probes for detecting the cytosine methylation state

C and/or single nucleotide polymorphisms and also to be used in an

C array for analysing diseases associated with CpG dinucleotides e.g.

C cancers and tumours. The probes can also be used in a method for

C ascertaining genetic and/or epigenetic parameters for the diagnosis

C and/or therapy of existing diseases or the predisposition to specific

C diseases, by analysing cytosine methylations. The parameters may be

C compared to another set of genetic and/or epigenetic parameters, the

C differences serving as basis for diagnosis and/or prognosis events which

C are disadvantageous to patients. The present sequence is one of the

C anglementary sequences derived from tumour suppressor genes and

C complementary sequence of the corresponding odd numbered sequence (e.g.

C is missing).

C is missing).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              P-PSDB; AAY85179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 10732 BP; 3149

                                                                                                δ
                                                                                                                                                                                                                                 В
                                                                                                                                                                                                                                                 γ
                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLJ01840-ABLJ6175) and the encoded proteins (ABLJ01840-ABLJ6175) and the encoded proteins

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                        measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, 1
